

# Watlington Air Quality

## NO<sub>2</sub> Monitor at Town Hall

The monitor on the Town Hall records the average NO<sub>2</sub> concentration for each hour throughout the day as in indication of the level of air pollution. The unverified results are shown below in comparison with the EC hourly and annual objectives for air quality. The monthly average was 43.6 µg/m<sup>3</sup>, slightly above the annual objective. The hourly objective was not exceeded during May, leaving the total for the year at 7 against the maximum of 18 exceedances allowed per year.
