

Watlington Air Quality

NO₂ Monitor at Town Hall

The Town Hall monitor records the average NO₂ concentration for each hour throughout the day as an indication of the level of air pollution. The monthly average for July was 25.2 µg/m³, and the annual average so far this year is 34.5 µg/m³, both of which are within the annual objective. There have been no further hourly exceedances this month leaving the total hourly exceedances for the year at 1. Over a week's data was lost at the beginning of the month. The ratified figures for January to March have now been released. Both the ratified and provisional (dashed line) concentrations are shown on the monthly average chart below.
