

Watlington Air Quality

NO₂ Monitor at Town Hall

The Town Hall monitor records the average NO₂ concentration for each hour throughout the day as an indication of the level of air pollution. The monthly average for March was 40.7 µg/m³, slightly over the annual objective. The annual average so far this year is 37.1 µg/m³ which is within the annual objective. However this annual average includes a period of a month in which the monitor was not working. We are told that it will be possible to recover the missing information from the machine at some later date. March 5th saw the highest hourly level for the year with a value of 180 µg/m³, close to the hourly objective.
