## NO<sub>2</sub> Monitor at Town Hall

The Town Hall monitor records the average NO<sub>2</sub> concentration for each hour throughout the day as an indication of the level of air pollution. The monthly average for October was 42.9 µg/m<sup>3</sup> which exceeds the annual objective for the first time since April this year, and the annual average so far this year is 34.7 µg/m<sup>3</sup> which is within the annual objective. There have been no further hourly exceedances this month leaving the total hourly exceedances for the year at 1. The ratified figures for January to March have now been released. Both the ratified and provisional (dashed line) concentrations are shown on the monthly average chart below.
