## NO<sub>2</sub> Monitor at Town Hall

The Town Hall monitor records the average NO<sub>2</sub> concentration for each hour throughout the day as an indication of the level of air pollution. The monthly average for January was 45.3 µg/m<sup>3</sup> which exceeds the annual objective by 13%. The figures for January to September last year are ratified for the first 9 months and provisional for the remainder of the year. There were no hourly exceedances during January. The monitor was out of action for the first few days of the year.
