

Watlington Air Quality

NO₂ Monitor at Town Hall

The Town Hall monitor records the average NO₂ concentration for each hour throughout the day as an indication of the level of air pollution. The monthly average for August was 27.0 µg/m³ which is typical in comparison with previous years. The average for the year to date is 34.4 µg/m³ which is below the annual objective. There were no hourly exceedances during August. The monthly average graph below shows the ratified levels for 2016 and previous years. The 2017 levels remain provisional.

The monitor failed towards the end of the month resulting in the loss of 7.1% of the readings.
