## NO<sub>2</sub> Monitor at Town Hall

The Town Hall monitor records the average NO<sub>2</sub> concentration for each hour throughout the day as an indication of the level of air pollution. The monthly average for December was 28.4 µg/m<sup>3</sup> which is very low for a winter month. The average for the year to date is 34.3 µg/m<sup>3</sup> which is within the annual objective of 40 µg/m<sup>3</sup> and is the same as 2015, the previous lowest annual average since 2013. There were no hourly exceedances during the whole of 2017. The monthly average graph below shows the ratified levels for 2016 and previous years. The 2017 levels remain provisional.
