## NO<sub>2</sub> Monitor at Town Hall

The Town Hall monitor records the average NO<sub>2</sub> concentration for each hour throughout the day as an indication of the level of air pollution. The monthly average for February was 35.5 µg/m<sup>3</sup> which is below the annual objective. The average for the year to date is 36.4 µg/m<sup>3</sup> which is also below the annual objective. There were no hourly exceedances during February.

The monitor failed to record about 10% of the hourly values in February.
