## NO<sub>2</sub> Monitor at Town Hall

The Town Hall monitor records the average NO<sub>2</sub> concentration for each hour throughout the day as an indication of the level of air pollution. The monthly average for January was 37.3 µg/m<sup>3</sup> which is below the annual objective and in about the middle of the range for the last Januarys. Last year's average for the full year was 37.1 µg/m<sup>3</sup> which is also below the annual objective. There were no hourly exceedances during January.

The monitor failed to record about 18% of the hourly values in January, including the first 4 days of the year.
