

Watlington Air Quality

NO₂ Monitor at Town Hall

The Town Hall monitor records the average NO₂ concentration for each hour throughout the day as an indication of the level of air pollution. The monthly average for March was 40.5 µg/m³ which is typical for this time of the year, with the last two days of month recording the highest daily averages of the year so far. The average for the year to date is 37.9 µg/m³ which is below the annual objective. There were no hourly exceedances during March.

The monitor failed to record about 6% of the hourly values in March.
