

Watlington Air Quality

NO₂ Monitor at Town Hall

The Town Hall monitor records the average NO₂ concentration for each hour throughout the day as an indication of the level of air pollution. The monthly average for March was 28.9 µg/m³ which is by a long way the lowest of the range of March values since recording was started. The level for the first three months of the year was 29.8 µg/m³ which is low, mainly as a result of the very low levels in the first two weeks of the year. There were no hourly exceedances during the month. The monthly average graph below shows the ratified levels for 2016 and previous years. The 2017 levels remain provisional.
