

Watlington Air Quality

NO₂ Monitor at Town Hall

The Town Hall monitor records the average NO₂ concentration for each hour throughout the day as an indication of the level of air pollution. The monthly average for May was 32.3 µg/m³ which is the lowest of the range of May values since recording was started. The level for the first five months of the year was 29.6 µg/m³ which is low. There were no hourly exceedances during the month. The monthly average graph below shows the ratified levels for 2017 and previous years, following the recent addition of these ratified values to the Air Quality England website.
